In chemistry, the dispersity is a measure of the heterogeneity of sizes of molecules or particles in a mixture. A collection of objects is called uniform if the objects have the same size, shape, or mass. A sample of objects that have an inconsistent size, shape and mass distribution is called non-uniform. The objects can be in any form of chemical dispersion, such as particles in a colloid ...

Nell'ingegneria chimica e nella chimica industriale, un reattore chimico è un contenitore progettato per farvi avvenire una reazione chimica. Esistono diverse tipologie di reattore chimico, in funzione della reazione da svolgervi e della natura chimica e delle sostanze coinvolte, nonché dalla modalità di conduzione della reazione: continua o discontinua (a lotti o batch).
