We are a general bookseller, free access download ebook. Our stock of books range from general children's school books to secondary and university education textbooks, self-help titles to large of topics to read.

### Classification Modern Evolutionary Answer Key

The key to understanding how the modern mind works is to realize that its circuits were not designed to solve the day-to-day problems of a modern American -- they were designed to solve the day-to-day problems of our hunter-gatherer ancestors. These stone age priorities produced a brain far better at solving some problems than others. For example, it is easier for us to deal with small, hunter ...

### Evolutionary Psychology Primer by Leda Cosmides and John Tooby

Homo ergaster is an extinct species or subspecies of archaic humans who lived in Africa in the Early Pleistocene. Whether H. ergaster constitutes a species of its own or should be subsumed into H. erectus is an ongoing and unresolved dispute within palaeoanthropology. Proponents of

synonymisation typically designate *H. ergaster* as "African *Homo erectus*" or "*Homo erectus ergaster*".

## **Homo ergaster - Wikipedia**

Natural selection is the differential survival and reproduction of individuals due to differences in phenotype. It is a key mechanism of evolution, the change in the heritable traits characteristic of a population over generations. Charles Darwin popularised the term "natural selection", contrasting it with artificial selection, which in his view is intentional, whereas natural selection is not.

This classification is obviously based on evolutionary starting assumptions. The Common Ancestor of Apes and Humans. While evolutionists are certain that modern apes (like the chimpanzee) and modern humans shared a common ancestor six to seven million years ago, this ancestor has never been specifically identified. Several fossilized apelike ...
