Hi! Since wallpaper changing is a terrible borked mess, I'm thinking changing it once per system startup (including from hibernation) would be a good compromise, compared to a periodic changing of background. I like the background changing, but not unresponsiveness (global) and GUI blinking (native GUI toolkit apps) that comes with it.

What is a good way to change desktop background on system ...

Your desktop wallpaper will be changed and converted into the black screen. You can reset it, but it might turn black again after 60 minutes until the problem is redressed. This issue may have a drastic effect on the performance of the computer, as well as the speed. Windows will deny access to some attributes automatically, for instance, personalization of the desktop screen. The battery can ...
